(54) Title: **NEW P2X₇ RECEPTOR ANTAGONISTS FOR USE IN THE TREATMENT OF INFLAMMATORY, IMMUNE OR
CARDIOVASCULAR DISEASES**

(I)

(57) Abstract: The invention provides piperidine compounds of general formula (I) in which A, B, X, Y, Z, R, R¹ and R² are as defined in the specification, their use as medicaments, compositions containing them and processes for their preparation.

NEW P2X₇ RECEPTOR ANTAGONISTS FOR USE IN THE TREATMENT OF INFLAMMATORY, IMMUNE OR CARDIOVASCULAR DISEASES

The present invention relates to piperidine derivatives, a process for their preparation, pharmaceutical compositions containing them, a process for preparing the pharmaceutical compositions, and their use in therapy.

The P2X₇ receptor (previously known as P2Z receptor), which is a ligand-gated ion channel, is present on a variety of cell types, largely those known to be involved in the inflammatory/immune process, specifically, macrophages, mast cells and lymphocytes (T and B). Activation of the P2X₇ receptor by extracellular nucleotides, in particular adenosine triphosphate, leads to the release of interleukin-1 β (IL-1 β) and giant cell formation (macrophages/microglial cells), degranulation (mast cells) and L-selectin shedding (lymphocytes). P2X₇ receptors are also located on antigen-presenting cells (APC), keratinocytes, salivary acinar cells (parotid cells) and hepatocytes.

It would be desirable to make compounds effective as P2X₇ receptor antagonists for use in the treatment of inflammatory, immune or cardiovascular diseases, in the aetiologies of which the P2X₇ receptor may play a role.

In accordance with the present invention, there is therefore provided a compound of formula (I):

(I)

where

A is phenyl or a 5- or 6-membered heterocyclic ring containing one or two heteroatoms selected from O, N or S; and optionally substituted by C₁₋₆alkyl, halogen, nitro, amino, alkylamino, CF₃, SO₂Me, NHSO₂Me or cyano;

B is C=O, NH or SO₂;

X is C=O, CH(Me), O or (CH₂)_p where p is 0 or 1;

Y is O, CH₂, NH or S;

Z is C=O or SO₂, provided that when Z is C=O, then Y is O, CH₂ or S;

R is hydrogen or C₁₋₆alkyl;

R¹ is hydrogen, halogen;

R² is phenyl optionally substituted by CO₂H, CO₂alkyl, CONH₂ or R² is OH, NHR³,

5 NHCH(R⁴)(CHR⁵)_nR⁶, NH-R⁷-R⁸, SO₂NHalkyl, NHCOalkyl, NHSO₂alkyl, morpholine, NR⁹R¹⁰, piperazine substituted by phenyl, alkoxyphenyl, pyridyl or fluorophenyl;

n is 0, 1 or 2;

R³ is hydrogen, a bi- or tricyclic saturated ring system optionally containing a nitrogen atom, piperidinyl, alkylpyrrolidine, ethynylcyclohexyl, a 5-membered aromatic ring
10 containing 2 or 3 heteroatoms, C₄₋₆ cycloalkyl optionally substituted by alkyl, cyano or hydroxy, or C₁₋₈ alkyl optionally containing an oxygen atom in the alkyl chain and being optionally substituted by one or more substituents selected from ethynyl, cyano, fluoro, di-alkylamino, hydroxy, thioalkyl, CO₂R¹¹ or CONH₂;

R⁴ is hydrogen or alkyl optionally substituted by hydroxy or alkoxy;

15 R⁵ is hydrogen or hydroxy;

R⁶ is CO₂R¹¹, NHCO₂R¹², CONH₂ or a 5 or 6-membered saturated ring containing an oxygen atom, a 5-membered heterocyclic ring containing one or two heteroatoms selected from O, N or S, or phenyl optionally substituted by one or more groups selected from alkyl, hydroxy, amino, alkoxy, or nitro;

20 R⁶ is alkyl;

R⁷ is a cyclopentane ring;

R⁸ is phenyl;

R⁹ and R¹⁰ are independently hydrogen, benzyl, alkenyl, cycloalkyl, alkyl optionally substituted by hydroxy, alkoxy, cyano, dialkylamino, phenyl, pyridyl or CO₂R¹¹ or R⁹ and

25 R¹⁰ together form a 5- to 7-membered saturated or partially saturated ring optionally containing a further heteroatom and optionally substituted by one or more groups selected from alkyl (optionally containing an oxygen atom in the chain and optionally substituted by hydroxy), COalkyl, CO₂R¹¹, COR¹³R¹⁴, CHO or piperidine,

R¹¹ is hydrogen or alkyl;

30 R¹² is alkyl; and

R¹³ and R¹⁴ are independently hydrogen or alkyl,
and pharmaceutically acceptable salts and solvates thereof.

In the context of the present specification, unless otherwise indicated, an alkyl substituent

35 or alkyl moiety in a substituent group may be linear or branched and may contain up to 6

carbon atoms, examples of which include methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, n-pentyl and n-hexyl.

Suitably A is phenyl or a 5- or 6-membered heterocyclic ring containing one or two
5 heteroatoms selected from O, N or S; and optionally substituted by C₁₋₆alkyl, halogen, nitro, amino, alkylamino, CF₃, SO₂Me, NHSO₂Me or cyano. Examples of suitable 5- or 6-membered heterocyclic rings include . Preferably A is optionally substituted phenyl, more preferably A is phenyl substituted by a nitro group.

10 Suitably B is C=O, NH or SO₂. Preferably B is C=O.

Suitably X is C=O, CH(Me), O or (CH₂)_p where p is 0 or 1, Y is O, CH₂, NH or S and Z is C=O or SO₂. Examples of groups formed by X, Y and Z include benzoxazinone and dihydroquinoline. Preferably X is CH₂, Y is O and Z is C=O such that X, Y and Z together
15 form part of a benzoxazinone ring which can be optionally substituted by methyl.

Suitably R is hydrogen or C₁₋₆alkyl, preferably R is hydrogen.

Suitably R¹ is hydrogen or halogen, preferably R¹ is hydrogen.

20

Suitably R² is phenyl optionally substituted by CO₂H, CO₂alkyl, CONH₂ or R² is OH, NHR³, NHCH(R⁴)(CHR⁵)_nR⁶, NH-R⁷-R⁸, SO₂NHalkyl, NHCOalkyl, NHSO₂alkyl, morpholine, NR⁹R¹⁰, piperazine substituted by phenyl, alkoxyphenyl, pyridyl or fluorophenyl. Preferably R² is NR⁹R¹⁰ where one of R⁹ or R¹⁰ is hydrogen and the other is
25 alkyl such as CH(CH₃)₂.

Particularly preferred compounds of the invention include those exemplified herein both in free base form as well as all pharmaceutically acceptable salts and/or solvates thereof.

30 According to the invention there is further provided a process for the preparation of a compound of formula (I) which comprises reaction of a compound of formula (II):

(II)

where R, R¹, X, Y and Z are as defined in formula (I) or a protected derivative thereof, with a compound of formula (III):

(III)

where B and R² are as defined in formula (I) or a protected derivative thereof, and L is a leaving group, and optionally thereafter in any order:

- converting one or more functional groups into further functional groups
- removing any protecting groups
- forming a pharmaceutically acceptable salt or solvate.

Examples of suitable leaving groups L include halogen, OMs and OTs. Preferably L is halogen, in particular chloro.

The reaction of compounds of formula (II) and (III) is preferably carried out in the presence of an organic amine such as a trialkylamine, for example triethylamine. The reaction is preferably carried out in an inert solvent such as NMP, DMF or dioxan preferably at elevated temperature, for example at the reflux temperature of the reaction mixture.

Compounds of formulae (II) can be prepared as follows:

(a) by reacting a compound of formula (IV):

(IV)

in which X, Y and Z are as defined in formula (II) or are protected derivatives thereof, with a compound of formula (V):

5

(V)

in which R²⁰ is a leaving group or an activated hydroxy group, or

10

(b) by reacting a compound of formula (VI):

(VI)

15

in which P a protecting group, with a compound of formula (VII):

(VII)

20

in which the groups L are leaving groups.

Compounds of formulae (IV) and (V) can be reacted under Mitsunobu conditions when R²⁰ in compound (V) is an activated hydroxy group. For the reaction of compounds (VI) and (VII), examples of suitable leaving L groups include halogen, in particular chloro, or imidazole. Alternatively triphosgene can be used. Suitable protecting groups for
5 compounds (V) and (VI) include t-butoxy carbonyl (Boc).

Compounds of formula (III), (IV), (V) and (VII) are prepared using literature procedures or are commercially available.

10 Functional groups can be converted into further functional groups using procedures known in the art. For example a carboxylic acid group can be converted into an ester or amide using standard chemistry.

Protecting groups can be added and removed using known reaction conditions. The use of
15 protecting groups is fully described in 'Protective Groups in Organic Chemistry', edited by J W F McOmie, Plenum Press (1973), and 'Protective Groups in Organic Synthesis', 2nd edition, T W Greene & P G M Wutz, Wiley-Interscience (1991).

Deprotection can be carried out using methods generally known in the art.

20

All novel intermediates form a further aspect of the invention.

The compounds of formula (I) above may be converted to a pharmaceutically acceptable salt or solvate thereof, preferably an acid addition salt such as a hydrochloride,
25 hydrobromide, phosphate, acetate, fumarate, maleate, tartrate, citrate, oxalate, methanesulphonate or *p*-toluenesulphonate, or an alkali metal salt such as a sodium or potassium salt.

Certain compounds of formula (I) are capable of existing in stereoisomeric forms. It will
30 be understood that the invention encompasses all geometric and optical isomers of the compounds of formula (I) and mixtures thereof including racemates. Tautomers and mixtures thereof also form an aspect of the present invention.

The compounds of the present invention are advantageous in that they possess
35 pharmacological activity and have utility as modulators of P2X₇ receptor activity.

They are therefore indicated as pharmaceuticals for use in the treatment or prevention of

rheumatoid arthritis, osteoarthritis, psoriasis, allergic dermatitis, asthma, hyperresponsiveness of the airway, chronic obstructive pulmonary disease (COPD), bronchitis, septic shock, glomerulonephritis, irritable bowel disease, Crohn's disease, ulcerative colitis, atherosclerosis, growth and metastases of malignant cells, myoblastic
5 leukaemia, diabetes, neurodegenerative disease, Alzheimer's disease, meningitis, osteoporosis, burn injury, ischaemic heart disease, stroke, peripheral vascular disease and varicose veins.

Accordingly, the present invention provides a compound of formula (I), or a
10 pharmaceutically acceptable salt or solvate thereof, as hereinbefore defined for use in therapy.

In another aspect, the invention provides the use of a compound of formula (I), or a pharmaceutically acceptable salt or solvate thereof, as hereinbefore defined in the
15 manufacture of a medicament for use in therapy.

The invention further provides a method of effecting immunosuppression (e.g. in the treatment of rheumatoid arthritis, irritable bowel disease, atherosclerosis or psoriasis) which comprises administering a therapeutically effective amount of a compound of
20 formula (I), or a pharmaceutically acceptable salt or solvate thereof, as hereinbefore defined to a patient.

For the above-mentioned therapeutic uses the dosage administered will, of course, vary with the compound employed, the mode of administration, the treatment desired and the
25 disorder indicated.

The compounds of formula (I) and pharmaceutically acceptable salts and solvates thereof may be used on their own but will generally be administered in the form of a pharmaceutical composition in which the formula (I) compound/salt/solvate (active
30 ingredient) is in association with a pharmaceutically acceptable adjuvant, diluent or carrier. Depending on the mode of administration, the pharmaceutical composition will preferably comprise from 0.05 to 99 %w (per cent by weight), more preferably from 0.10 to 70 %w, of active ingredient, and, from 1 to 99.95 %w, more preferably from 30 to 99.90 %w, of a pharmaceutically acceptable adjuvant, diluent or carrier, all percentages by weight being
35 based on total composition.

Thus, the present invention also provides a pharmaceutical composition comprising a compound of formula (I), or a pharmaceutically acceptable salt or solvate thereof, as hereinbefore defined in association with a pharmaceutically acceptable adjuvant, diluent or carrier.

The invention further provides a process for the preparation of a pharmaceutical composition of the invention which comprises mixing a compound of formula (I), or a pharmaceutically acceptable salt or solvate thereof, as hereinbefore defined with a pharmaceutically acceptable adjuvant, diluent or carrier.

The pharmaceutical composition of the invention may be administered topically (e.g. to the lung and/or airways or to the skin) in the form of solutions, suspensions, heptafluoroalkane aerosols and dry powder formulations; or systemically, e.g. by oral administration in the form of tablets, capsules, syrups, powders or granules, or by parenteral administration in the form of solutions or suspensions, or by subcutaneous administration or by rectal administration in the form of suppositories or transdermally.

The present invention will now be further illustrated by reference to the following examples.

Example 1

2-({3-Nitro-4-[4-(2-oxo-2H-3,1-benzoxazin-1(4H)-yl)piperidin-1-yl]phenyl}carbonyl)benzoic acid

A solution of 1-piperidin-4-yl-1,4-dihydro-2H-3,1-benzoxazin-2-one hydrochloride (J. Med. Chem. 1998, 2157) (0.8g), 2-(4-chloro-3-nitrobenzoyl)benzoic acid (0.9g) and triethylamine (0.8ml) in N,N-dimethylformamide (5ml) was stirred at room temperature for 72h. The mixture was partitioned between ethyl acetate and dilute hydrochloric acid, the organic layer was evaporated under reduced pressure. Purification was by chromatography

eluting with 4% methanol/dichloromethane. The residue was triturated from methanol, yield 0.4g as a solid.

25 \pm -1,1-Dimethylethyl (cis)-3-methyl-4-(2-oxo-2H-3,1-benzoxazin-1(4H)-yl)piperidine-1-carboxylate (0.24g) was dissolved in 4M hydrogen chloride in 1,4-dioxane (5ml) stirred at room temperature for 4h, then evaporated under reduced pressure. The product was dissolved in 1-methyl 2-pyrrolidinone (10ml), N,N-diisopropylethylamine (0.5ml) and the product from example 117 step (i) (0.23g) added. The mixture was heated at 100°C for 12h, partitioned between ethyl acetate and water, the organics separated, dried and

30 evaporated under reduced pressure. Purification was by chromatography eluting with 30-

40% ethyl acetate/isohexane. The hydrochloride salt was made from ethereal hydrogen chloride. Yield 0.07g.

Pharmacological Analysis

Certain compounds such as benzoylbenzoyl adenosine triphosphate (bbATP) are known to be agonists of the P2X₇ receptor, effecting the formation of pores in the plasma membrane (Drug Development Research (1996), 37(3), p.126). Consequently, when the receptor is activated using bbATP in the presence of ethidium bromide (a fluorescent DNA probe), an increase in the fluorescence of intracellular DNA-bound ethidium bromide is

observed. The increase in fluorescence can be used as a measure of P2X₇ receptor activation and therefore to quantify the effect of a compound on the P2X₇ receptor.

In this manner, each of the title compounds was tested for antagonist activity at the P2X₇ receptor. Thus, the test was performed in 96-well flat bottomed microtitre plates, the wells being filled with 100 µl of test solution comprising 80 µl of a suspension of THP-1 cells (2.5×10^6 cells/ml) containing 10^{-4} M ethidium bromide, 10 µl of a high potassium buffer solution containing 10^{-5} M bbATP, and 10 µl of the high potassium buffer solution containing 1×10^{-4} M test compound (in 10% v/v DMSO). The plate was covered with a plastic lid and incubated at 37°C for one hour. The plate was then read in a Spectromax Gemini Fluorescent plate reader excitation 525 nm, emission 610 nm, slit widths: Ex 15 nm, Em 20 nm. For the purposes of comparison, bbATP (a P2X₇ receptor agonist) and N-(5-methoxy-2-methylphenyl)-tricyclo[3.3.1.1^{3,7}]decane-1-acetamide (WO99/29660, a P2X₇ receptor antagonist) were used separately in the test as controls. From the readings obtained, a pIC₅₀ figure was calculated for each test compound, this figure being the negative logarithm of the concentration of test compound necessary to reduce the bbATP agonist activity by 50%. The pIC₅₀ was then corrected using a modified Cheng Prusoff calculation based on agonist A₅₀ (Trends in Pharmacological Sciences (1993), 14(4), 110-2). Each of the compounds of the Examples demonstrated antagonist activity, having a pIC₅₀ figure > 5.00.

Claims

1. A compound of formula (I):

(I)

where

A is phenyl or a 5- or 6-membered heterocyclic ring containing one or two heteroatoms selected from O, N or S; and optionally substituted by C₁₋₆alkyl, halogen, nitro, amino, alkylamino, CF₃, SO₂Me, NHSO₂Me or cyano;

B is C=O, NH or SO₂;

X is C=O, CH(Me), O or (CH₂)_p where p is 0 or 1;

Y is O, CH₂, NH or S;

Z is C=O or SO₂, provided that when Z is C=O, then Y is O, CH₂ or S;

R is hydrogen or C₁₋₆alkyl;

R¹ is hydrogen, halogen;

R² is phenyl optionally substituted by CO₂H, CO₂alkyl, CONH₂ or R² is OH, NHR³, NHCH(R⁴)(CHR⁵)_nR⁶, NH-R⁷-R⁸, SO₂NHalkyl, NHCOalkyl, NHSO₂alkyl, morpholine, NR⁹R¹⁰, piperazine substituted by phenyl, alkoxyphenyl, pyridyl or fluorophenyl; n is 0, 1 or 2;

R³ is hydrogen, a bi- or tricyclic saturated ring system optionally containing a nitrogen atom, piperidinyl, alkylpyrrolidine, ethynylcyclohexyl, a 5-membered aromatic ring containing 2 or 3 heteroatoms, C₄₋₆ cycloalkyl optionally substituted by alkyl, cyano or hydroxy, or C₁₋₈ alkyl optionally containing an oxygen atom in the alkyl chain and being optionally substituted by one or more substituents selected from ethynyl, cyano, fluoro, dialkylamino, hydroxy, thioalkyl, CO₂R¹¹ or CONH₂;

R⁴ is hydrogen or alkyl optionally substituted by hydroxy or alkoxy;

R⁵ is hydrogen or hydroxy;

R⁶ is CO₂R¹¹, NHCO₂R¹², CONH₂ or a 5 or 6-membered saturated ring containing an oxygen atom, a 5-membered heterocyclic ring containing one or two heteroatoms selected

from O, N or S, or phenyl optionally substituted by one or more groups selected from alkyl, hydroxy, amino, alkoxy, or nitro;

R⁶ is alkyl;

R⁷ is a cyclopentane ring;

5 R⁸ is phenyl;

R⁹ and R¹⁰ are independently hydrogen, benzyl, alkenyl, cycloalkyl, alkyl optionally substituted by hydroxy, alkoxy, cyano, dialkylamino, phenyl, pyridyl or CO₂R¹¹ or R⁹ and R¹⁰ together form a 5- to 7-membered saturated or partially saturated ring optionally containing a further heteroatom and optionally substituted by one or more groups selected from alkyl (optionally containing an oxygen atom in the chain and optionally substituted by hydroxy), COalkyl, CO₂R¹¹, COR¹³R¹⁴, CHO or piperidine,

10 R¹¹ is hydrogen or alkyl;

R¹² is alkyl; and

R¹³ and R¹⁴ are independently hydrogen or alkyl,

15 or a pharmaceutically acceptable salt or solvate thereof.

2. A compound according to claim 1 in which A is phenyl optionally substituted by C₁₋₆alkyl, halogen, nitro, amino, alkylamino, CF₃, SO₂Me, NHSO₂Me or cyano.

20 3. A compound according to claim 1 or 2 in which B is C=O.

4. A compound according to any one of claims 1 to 3 in which X is CH₂, Y is O and Z is C=O.

25 5. A compound according to any one of claims 1 to 4 in which R is hydrogen.

6. A compound according to any one of claims 1 to 5 in which R¹ is hydrogen.

7. A compound according to any one of claims 1 to 6 in which R² is NR⁹R¹⁰ where one of R⁹ or R¹⁰ is hydrogen and the other is alkyl.

30 8. A compound according to claim 1 which is:

or a pharmaceutically acceptable salt or solvate thereof.

10

9. A pharmaceutical composition comprising a compound according to any one of claims 1 to 8 in combination with a pharmaceutically acceptable diluent, adjuvant or carrier.

10. A compound according to any one of claims 1 to 8 for use in therapy.

15

11. A compound according to any one of claims 1 to 8 for use in the treatment of rheumatoid arthritis.

12. Use of a compound according to any one of claims 1 to 8 in the manufacture of a
20 medicament for use in therapy.

13. A method of effecting immunosuppression which comprises administering to a patient a therapeutically effective amount of a compound according to any one of claims 1 to 8.

25 14. A process for the preparation of a compound of formula (I) which comprises reaction of a compound of formula (II):

(II)

where R, R¹, X, Y and Z are as defined in formula (I) or a protected derivative thereof, with a compound of formula (III):

(III)

5

where B and R² are as defined in formula (I) or a protected derivative thereof, and L is a leaving group, and optionally thereafter in any order:

- converting one or more functional groups into further functional groups
- removing any protecting groups
- 10 • forming a pharmaceutically acceptable salt or solvate.

INTERNATIONAL SEARCH REPORT

A. CLASSIFICATION OF SUBJECT MATTER

IPC7: C07D 265/18, C07D 221/22, C07D 495/16, A61K 31/4166, A61K 31/4748,
A61P 37/00

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC7: C07D, A61K, A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

SE,DK,FI,NO classes as above

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.

☐ Further documents are listed in the continuation of Box C.☒ See patent family annex.

* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier application or patent but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

"I" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family

INTERNATIONAL SEARCH REPORT

International application No.
PCT/SE00/02504**Box I** Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: **13**
because they relate to subject matter not required to be searched by this Authority, namely:
see next sheet
2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/SE00/02504

Claim 13 relates to a method of treatment of the human or animal body by surgery or by therapy/a diagnostic method practised on the human or animal body/Rule 39.1(iv). Nevertheless, a search has been executed for this claim. The search has been based on the alleged effects of the compound/composition.
